Critical Work Function 2. Control Heat Exchange Systems		Occupational Skills, Knowledge & Conditions			
Key Activity	Performance Criteria	Occupational Skills & Knowledge	Conditions		
2.2 Monitor and regulate boiler system	2.2.1 Heat transfer rates meet desired temperature per process/equipment specifications.	Process Variables	Drums	Valves	Dryers
	2.2.2 Production costs which are controlled by operators indicate efficient use of equipment, raw materials, utilities and other resources.	Operating Parameters	Hoses	Filters	Eductors
			Compressors	Demisters	Meters
	2.2.3 Product/process meets established process specifications.	Heat and/or Material Balances	Extruders	Condenser	Incinerator
			Flares	Generators	Basins
	2.2.4 Equipment is monitored and maintained according to manufacturer/company operational parameters, safety standards and government regulations.	SHE (Safety, Health, & Environment)	Boilers	Transformers	pH meters
			Cryogenic unit	Aerators	Superheaters
	2.2.5 Equipment maintenance is coordinated according to mechanical requirements, maintenance schedule or equipment malfunction.	Instrumentation and Control Systems	Economizer	Clarifiers	Safety boots
Switch gears			Fork lift	Ear plugs	
2.2.6 Equipment is prepared for mechanical work including shut down and Lockout/Tagout according to company policy.	Fired Heaters/Furnaces	Skimmers	Hand truck	Safety shower	
		Steam traps	Slicker suit	First aid kit	
2.2.7 Equipment is returned to service following mechanical work including verifying work, completing Lockout/Tagout, completing paperwork and start-up according to company policy.	Boilers	Gloves	Hard hat	Fire monitors	
		Respirator	Eyewash fountain	Tower (tray, packed)	
2.2.8 Process variables meet product and equipment parameters.	Steam Generation	Acid suit	FRCs (Flame Retardant Clothing)	API	
		Ear muffs	Thermal suit	separators/traps	
2.2.9 Equipment maintenance is coordinated according to mechanical requirements, maintenance schedule or equipment malfunction.	Personal Protective and/or Safety Equipment Operations	SCBA (Self-Contained Breathing Apparatus)	Furnaces/fired heaters	Microfiltration equipment	
		Face shield	Fire extinguisher	Desuperheaters	
2.2.10 Equipment is prepared for mechanical work including shut down and Lockout/Tagout according to company policy.	Boiler Feed Water	Motor control centers	Metatarsal guard	Heat exchangers (coolers, reboilers, fans)	
		Reverse osmosis unit	Control valve (regulator)	Heat recovery steam generator (waste heat boiler)	
2.2.11 Equipment is returned to service following mechanical work including verifying work, completing Lockout/Tagout, completing paperwork and start-up according to company policy.	Steam Condensate	Safety goggles/glasses	Instrumentation (analyzers, gauges, control loops, temperature sensing devices)	Reactors (batch stirred tank or continuous stirred tank, fixed bed catalyst or fluidized bed catalyst)	
		Drum dolly	Tools (such as sample thief, strapping tape, pipe wrench, channel locks, valve wrenches)	Fittings	
2.2.12 Equipment is prepared for mechanical work including shut down and Lockout/Tagout according to company policy.	Natural Gas	Pumps (centrifugal, vacuum, positive displacement)	Tubing	Safety harness	
		Drivers (such as electrical motors, steam turbines, gas turbines, air drivers)	Tanks	Personal lift	
2.2.13 Equipment is returned to service following mechanical work including verifying work, completing Lockout/Tagout, completing paperwork and start-up according to company policy.	Fuel Gas	Reverse osmosis unit	Resins	Computers	
		Safety goggles/glasses	Cooling towers	UPS (uninterruptible power source)

CHEMICAL / REFINING PROCESS TECHNICIAN SKILL STANDARDS

Academic and Employability Knowledge and Skill Matrix for Critical Work Function 2: Control Heat Exchange Systems

On a scale of 1 (lowest) to 5 (highest), identify the level of complexity required in each of these skills for the worker to perform the critical work function. Keep in mind that this scale is not for rating an individual's proficiency. It is intended only for rating the level of complexity required to do the work.

Statement of Assessment for Critical Work Function 2:

The statements of assessment can do any of several things:

- Define tools or strategies that industry could use to assess the level of competency a worker has attained in a particular critical work function.
- Define for trainers and educators how to assess the level of competency a student has attained relevant to the critical work function.
- Define the level of mastery of the critical work function that indicates that a worker or student has achieved an entry-, intermediate-, or advanced level of mastery of a critical work function.

Tools & Strategy: The assessment process should include one or more of the following:

A. Written tests could include:

- (1) Multiple choice and essay questions that demonstrate an understanding of knowledge being assessed.
- (2) Graphic representations (e.g. P&IDs and loop drawings) that reveal an understanding of symbology and connections between processes and devices.
- (3) Preparation and justification of a reasonable solution to a problem scenario.

B. Hands-on exercises or simulations to demonstrate acquisition of knowledge, skills and attitudes that could:

- (1) Represent a real life scenario, problem or challenging situation in the context of a work environment.
- (2) Apply relevant knowledge or skills.
- (3) Focus on the application of knowledge and skills to a new situation.
- (4) Demonstrate an ability to plan, organize and create a product or an event.
- (5) Illustrate by individual performance the attained levels of knowledge, skills and attitudes.
- (6) Include observation of events, groups and individuals that focuses on the relevant traits of the skill or attitude being observed.

Academic and Employability Knowledge and Skill Matrix for Critical Work Function 4: Control Generation Systems

On a scale of 1 (lowest) to 5 (highest), identify the level of complexity required in each of these skills for the worker to perform the critical work function. Keep in mind that this scale is not for rating an individual's proficiency. It is intended only for rating the level of complexity required to do the work.

Statement of Assessment for Critical Work Function 4:

The statements of assessment can do any of several things:

- Define tools or strategies that industry could use to assess the level of competency a worker has attained in a particular critical work function.
- Define for trainers and educators how to assess the level of competency a student has attained relevant to the critical work function.
- Define the level of mastery of the critical work function that indicates that a worker or student has achieved an entry-, intermediate-, or advanced level of mastery of a critical work function.

Tools & Strategy: The assessment process should include one or more of the following:

A. Written tests could include:

- (1) Multiple choice and essay questions that demonstrate an understanding of knowledge being assessed.
- (2) Graphic representations (e.g. P&IDs and loop drawings) that reveal an understanding of symbology and connections between processes and devices.
- (3) Preparation and justification of a reasonable solution to a problem scenario.

B. Hands-on exercises or simulations to demonstrate acquisition of knowledge, skills and attitudes that could:

- (1) Represent a real life scenario, problem or challenging situation in the context of a work environment.
- (2) Apply relevant knowledge or skills.
- (3) Focus on the application of knowledge and skills to a new situation.
- (4) Demonstrate an ability to plan, organize and create a product or an event.
- (5) Illustrate by individual performance the attained levels of knowledge, skills and attitudes.
- (6) Include observation of events, groups and individuals that focuses on the relevant traits of the skill or attitude being observed.

CHEMICAL / REFINING PROCESS TECHNICIAN SKILL STANDARDS

Academic and Employability Knowledge and Skill Matrix for Critical Work Function 6: Control Utility Systems

On a scale of 1 (lowest) to 5 (highest), identify the level of complexity required in each of these skills for the worker to perform the critical work function. Keep in mind that this scale is not for rating an individual's proficiency. It is intended only for rating the level of complexity required to do the work.

Statement of Assessment for Critical Work Function 6

The statements of assessment can do any of several things:

- Define tools or strategies that industry could use to assess the level of competency a worker has attained in a particular critical work function.
- Define for trainers and educators how to assess the level of competency a student has attained relevant to the critical work function.
- Define the level of mastery of the critical work function that indicates that a worker or student has achieved an entry-, intermediate-, or advanced level of mastery of a critical work function.

Tools & Strategy: The assessment process should include one or more of the following:

A. Written tests could include:

- (1) Multiple choice and essay questions that demonstrate an understanding of knowledge being assessed.
- (2) Graphic representations (e.g. P&IDs and loop drawings) that reveal an understanding of symbology and connections between processes and devices.
- (3) Preparation and justification of a reasonable solution to a problem scenario.

B. Hands-on exercises or simulations to demonstrate acquisition of knowledge, skills and attitudes that could:

- (1) Represent a real life scenario, problem or challenging situation in the context of a work environment.
- (2) Apply relevant knowledge or skills.
- (3) Focus on the application of knowledge and skills to a new situation.
- (4) Demonstrate an ability to plan, organize and create a product or an event.
- (5) Illustrate by individual performance the attained levels of knowledge, skills and attitudes.
- (6) Include observation of events, groups and individuals that focuses on the relevant traits of the skill or attitude being observed.

Statement of Assessment for Critical Work Function 9

The statements of assessment can do any of several things:

- Define tools or strategies that industry could use to assess the level of competency a worker has attained in a particular critical work function.
- Define for trainers and educators how to assess the level of competency a student has attained relevant to the critical work function.
- Define the level of mastery of the critical work function that indicates that a worker or student has achieved an entry-, intermediate-, or advanced level of mastery of a critical work function.

Tools & Strategy: The assessment process should include one or more of the following:

A. Written tests could include:

- (1) Multiple choice and essay questions that demonstrate an understanding of knowledge being assessed.
- (2) Graphic representations (e.g. P&IDs and loop drawings) that reveal an understanding of symbology and connections between processes and devices.
- (3) Preparation and justification of a reasonable solution to a problem scenario.

B. Hands-on exercises or simulations to demonstrate acquisition of knowledge, skills and attitudes that could:

- (1) Represent a real life scenario, problem or challenging situation in the context of a work environment.
- (2) Apply relevant knowledge or skills.
- (3) Focus on the application of knowledge and skills to a new situation.
- (4) Demonstrate an ability to plan, organize and create a product or an event.
- (5) Illustrate by individual performance the attained levels of knowledge, skills and attitudes.
- (6) Include observation of events, groups and individuals that focuses on the relevant traits of the skill or attitude being observed.
